

Tracked Mowers | Delivery & First-use Guide

Arrival, unpacking, startup, and first-use guide for GST-550 and GST-900 tracked mower deliveries.

On-arrival checks

- Check the crate or transport frame for impact damage before signing off the delivery.
- Confirm model label, quantity, charger, remote control, and supplied tools against the packing list.
- Before first start, inspect visible fasteners, deck guards, and track condition.

Before the first startup

- Check fuel level, engine oil, battery voltage, and general switch position before starting.
- Keep people, animals, and loose debris clear of the work zone before testing movement or blade engagement.
- Use the machine manual and engine manual together during first setup.

First-use sequence

- Power on the machine and confirm the voltage display is healthy before startup.
- Start the engine, allow it to stabilise, then test remote connection, movement, and blade engagement in a clear area.
- After the first short test, recheck fasteners, blade area, tracks, and visible service points.

Transport, storage, and support

- Use lifting and handling equipment that matches the packed weight and crate dimensions.
- Recharge the machine during storage according to the operator manual schedule.
- Use GREEN SHINE support if delivered condition, startup behaviour, or document mapping is unclear.

Packed-delivery reference

Model	Packed size	Packed weight
GST-550	105 x 98 x 62 cm	165 kg
GST-900	140 x 136 x 70 cm	348 kg
